

Working Student/Intern Energy Market (m/f/d)

We believe in mobility without emissions, working in harmony with both people and the environment. For this reason, we are creating technology to enable everyone to set up and operate their own charging infrastructure on a decentralized basis. With our bespoke charging platform, we make a significant contribution to building a global charging network.

Our team is based on an open, diverse culture in which everyone is responsible for their own work. With us, you will have the space to realize your own ideas and to grow as an individual. The desire to change something drives every one of us. Become a part of our team and be inspired by our vision.

What challenges await you at reev

- **Market Screening:** You have a good understanding of electricity markets, related products, and the relevant players in the market. You keep track of current developments and trends in the market which affect our business model or open up new opportunities.
- **Business Model:** You develop new concepts and business ideas which allow us to further integrate charging activities in the electricity market environment and improve the user experience of our customers.
- **Data analysis:** Your interest and competence in data analysis enables you to provide valuable analysis for the team and to determine the monetary potential of new products.
- **Growth:** You support the team in its ambition to continuously grow our business, acquire new customers and partners, enter new markets and push the internationalization.
- **Regulation and Product Fit:** Your interest in electricity markets makes it easy for you to keep track of regulatory changes at the intersection of electricity markets and eMobility. Together, we investigate how to adapt to these changes and tailor our product to changing customer needs.

What we need from you

- You are currently studying with a focus on energy engineering, economics or management sciences.
- In the best case, you have already gained practical experience in the energy market sector.
- Experience with programming languages such as R or Python are a plus.
- You like to bring your own suggestions into everyday work and look for potential for optimization.
- You are a communicative and open personality who likes to work both independently and in a team.
- Your analytical skills and structured way of thinking help you in your daily work.
- You are proficient in English, German or/and other languages are a plus.

What awaits you at reev

- We offer you the opportunity to play a key role in shaping a rapidly growing company on track to become one of the leading providers of charging solutions, and, in doing so, to make your own contribution to the future of eMobility.
- We foster an environment of short decision-making processes and open, direct communication. This allows you to work effectively, whilst growing with your tasks.
- Our people work with first class equipment, because we value the time that you spend working for us.
- All colleagues are just an arm's length away from you because we feel communication is one of the most important success factors.
- We live flat hierarchies where purpose and reasoning is always more important than roles and ranks.
- Though our office feels like home, you can still work remotely at flexible hours, have plenty of vacation days and receive a competitive package.

If this sounds like a great opportunity for you, send us your application to:
